Executive Summary.....	3
Proposed Operating Model.....	4
Platform Capabilities.....	5
Security and Control Evidence.....	6
Implementation Approach.....	7
Conclusion.....	8

1. Executive Summary

Emirates NBD can use SettleMint's Digital Asset Lifecycle Platform to operate controlled EVM-based tokenized asset workflows with clear governance, auditable activity, and a pragmatic implementation path. The response focuses on production control: who can do what, how changes are approved, how lifecycle events are evidenced, and how the bank keeps custody and regulatory boundaries explicit.

2. Proposed Operating Model

SettleMint provides the platform control plane for issuance, role-based permissions, lifecycle operations, and integration with the bank's surrounding systems. The bank remains the owner of participant policy, custody-provider selection, signatory authority, and final operating procedures. That boundary matters: it keeps the solution credible for bank risk, compliance, legal, and operations teams.

3. Platform Capabilities

Capability		Response
Tokenized asset lifecycle		Supports EVM-based issuance, transfer controls, servicing events, and operational oversight.
Governance		Supports maker-checker patterns, role-based permissions, approval evidence, and auditable operational activity.
Integration		Supports API-led integration patterns for custody, reporting, compliance, and enterprise workflow systems.
Deployment		Supports bank-grade implementation planning with environment separation, testing, cutover, and support rhythm.

4. Security and Control Evidence

The implementation should produce evidence that risk and audit teams can inspect: permission models, change records, transaction approvals, lifecycle event history, and exception handling. The platform response is designed to reduce ambiguity during procurement by separating native platform capability from bank-owned operating decisions.

5. Implementation Approach

The recommended implementation starts with a controlled scope, validates the operating model with business and risk stakeholders, confirms custody and signing boundaries, and then expands into additional asset classes or lifecycle events. This avoids a fragile proof-of-concept and creates a reusable foundation for future tokenization work.

6. Conclusion

SettleMint gives Emirates NBD a credible path to industrialize tokenized asset operations while preserving bank control over governance, custody boundaries, compliance evidence, and delivery risk.
