

Ref #	Category	Sub-Category
Q1	Platform	Tokenization
Q2	Security	Governance
Q3	Integration	Custody

Question / Requirement

Describe support for EVM tokenized asset lifecycle workflows.

Explain maker-checker controls and audit evidence.

Describe custody/signing integration posture and operating boundary.

SettleMint Response

DALP supports EVM-based tokenized asset lifecycle workflows, including issuance, transfer, and redemption. The operating model supports maker-checker governance, permissioned actions, audit trails, and custody. Custody and signing are handled through the bank-approved custodian or signing provider.

Status	Evidence / Reference
Met	DALP canon; bid-manager regression fixture
Met	Bid-manager technical skeleton; governance
Met	Bid-manager custody boundary rule
