Digital Asset Lifecycle Platform

Enterprise-Grade Asset Tokenization

SettleMint

Agenda

1. What is DALP?

2. Core Capabilities

3. Asset Lifecycle

4. Compliance & Security

5. Integration Options

6. Next Steps

What is DALP?

The foundation for digital asset management

A Complete Platform

The Digital Asset Lifecycle Platform (DALP) enables organizations to issue, manage, and transfer digital assets on blockchain networks.

- Tokenization of real-world assets
- Automated lifecycle management
- Built-in compliance controls
- Enterprise-grade security

Core Capabilities

Powerful features for asset management

Four Key Capabilities

Compliance engine

Link identity, eligibility, and transfer restrictions so policy is enforced before execution, not checked afterward.

Token issuance

Create governed digital assets with configurable parameters, issuance controls, and reusable launch patterns for new products.

Operational visibility

Give teams monitoring, audit evidence, and runtime insight into asset activity once products are live.

Lifecycle management

Run transfers, servicing events, approvals, and operational changes on one platform instead of scattered tooling.

Asset Lifecycle

From creation to settlement

End-to-End Lifecycle

Creation & Issuance

- Define asset parameters
- Set transfer rules
- Configure compliance checks
- Deploy on blockchain

Ongoing Management

- Transfer & settlement
- Corporate actions
- Compliance monitoring
- Reporting & audit

Why SettleMint?

Enterprise-grade infrastructure
